DETAILED ACTION

1. Claims 1-4 are presented for examination.
2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The current title is imprecise.

Claim Objections

3. Claims 1 and 3 are objected to because of the following informalities:

In claim 1, lines 3-4, "the calculation element" should be --the asynchronous calculation element--; line 4, "the window" should be --the predetermined time window--.

In claim 3, line 5, "the window" should be --the predetermined time window--.

Appropriate correction is required.

Claim Rejections - 35 U.S.C. § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claim 2 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification fails to disclose that the total power is determined according to a maximum possible power consumption of the calculation element.

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the total power " in line 4. There is insufficient antecedent basis for the limitation in the claim.

Claim 3 recites the limitations "the instantaneous energy" in line 4; "the calculation element" and "the total power " in line 5. There are insufficient antecedent basis for the limitations in the claim.

Claims 2 and 4 are rejected because they incorporate the deficiencies of claims 1 or 3 respectively.

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

9. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Feyt et al. (Feyt)¹, U.S. patent no. 6,698,662.

¹ Feyt is a reference cited by applicant.

As per claim 3, Feyt discloses a circuit for supplying at least one asynchronous processing element of an integrated circuit [fig. 1], comprising a variable supply element of the asynchronous processing element [fig. 1], randomly distributed, and in a predetermined time window, an instantaneous energy provided to a calculation element, a total power in the predetermined time window being predetermined [col. 1, line 65-col. 2, line 3; col. 2, lines 48-62; col. 3, lines 35-38; col. 4, lines 8-12].

As per claim 4, Feyt discloses that the variable supply element is controlled by a pseudo-random generator [28, fig. 1; col. 57-60].

As to claims 1-2, Claims 3-4 basically are the corresponding elements that are carried out the method of operating steps in claims 1-2. Accordingly, claims 1-2 are rejected for the same reason as set forth in claims 3-4.

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fruhauf et al., US patent no. 4,932,053, discloses a pseudo-random generator [fig. 2; col. 4, lines 27-28].
